- Tall, branchy plant
- Excellent emergence, early season vigour and standability
- Excellent tolerance to Sudden Death Syndrome
- Very good White Mould tolerance
- Resistance to Soybean Cyst Nematode (R3) and very good field tolerance to Phytophthora Root Rot (Rps1c)
- Performs well across all soil types tested

Acceleron Seed Applied Solutions products are an excellent complement with DEKALB® soybeans. By improving protection from diseases, insects and improving nutrient uptake, crops may experience better early season vigour and improved yield potential.

	Fungicides Excellent control of soil and seedborne disease including <i>Rhizoctonia</i> , <i>Pythium</i> , <i>Fusarium</i> , <i>Phomopsis</i> , and <i>Phytophthora</i> .		Bio-Enhancer Nutrient and moisture deficiencies can impair root growth, making it even harder for plants to get the nutrients and moisture they need. Biological products make nutrients available to plants, helping maximize yield potential. These products can also enhance functional root volume and increase nutrient uptake, protecting plants from moisture or nutrient stress.
	Insecticide Protection from early season pests such as bean leaf beetles, black cutworms, seedcorn maggot, and wireworm.		

Acceleron® E-007 SAT is included in the product offerings as a finishing product that improves the seed flow through seed handling and planting equipment, while enhancing the seed coating and appearance of the treated seeds.
